**ROTOTEC**  
CLEVER GEOENERGY PIONEER

# Cost-efficient and sustainable heating and cooling

Rototec is the market-leading supplier of geothermal energy solutions. We specialize in delivering geothermal wells to residential as well as commercial properties. We offer a solution, which includes everything from consultation and planning to installation. With our extensive fleet of drilling machines, we carry out assignments of all sizes, always on time.

Geothermal heat is the energy stored in the bedrock. Most of this energy is stored solar energy but some of it is also geothermal energy from deep underground. Ground source heat pumps are very efficient and can save you up to 75% of your energy consumption. As a bonus you can get free cooling from the geothermal system.

## The environmentally smart way to heat and cool buildings

The sun radiates heat that is then stored in the ground. This renewable energy can in turn be extracted from the bedrock with a geothermal system to heat all types of buildings. It is also possible to recharge the geothermal wells with unused heat that can subsequently be used during the cold

winter months. Today we are facing a major change towards efficient and sustainable energy production. With our geothermal solution, you can use the energy beneath your feet in an environmentally friendly way, and it's even free of charge.

# Benefits of Rototec's geothermal energy solutions

## SAVINGS.

With geothermal energy, you can save up to 50% of your heating and cooling costs.

## SELF-SUFFICIENCY.

Geothermal energy increases your self-sufficiency in energy production.

## SUSTAINABLE ENERGY.

Geothermal energy is pollution-free and classified as a renewable energy source.

## QUALITY AND EXPERTISE.

Our geoenergy consultants develop well-functioning systems with customized design and dimensioning for your property.

## PROPERTY VALUE.

Investing in geothermal energy from Rototec increases the value of the property.

## FREE COOLING.

The geothermal system can provide your property with free cooling in addition to providing heating.

## Choose the market-leading supplier

Geothermal energy offers great savings, provides efficient heating and is also a sustainable form of energy. That's why we encourage you to invest in the energy of the future with Rototec - your wallet and future generations will thank you.

Rototec is a solid industry innovator. We guarantee high-quality geothermal energy projects through feasibility studies, thermal response measurements of the bedrock, energy simulations and dimensioning for the property.

Invest in the energy of the future - Welcome to contact us for more information and a quotation!

Rototec is the market-leading provider of geothermal solutions and a driven pioneer. Our services cover the entire geothermal energy system value chain from consultation to installation.

For heating and cooling we offer an affordable, reliable and renewable alternative to heating oil, propane or natural gas. Under the property your own energy is available beneath your feet.
